

## Rail and paving contract

### Combi terminal, Høje Taastrup

In connection with the expansion of the Combi terminal in Høje Taastrup, we completed the contract at the agreed time, due to very thorough planning and expediting of the work whenever possible.

The contract was carried out as main contractor and included an expansion of the train parking area of 26,500 m<sup>2</sup>.

DB Schenker Rail has thus obtained an eight-fold increase in container storage space and an extra railroad track and switch.

Sewers were laid in the area and chippings and new rails were laid down on an 800 m long section as well as installation of a new switch.

We carried out large quantities of cement stabilisation and lime stabilisation to ensure a large load carrying capacity on the site.

### Construction period

2010 - 2011

### Quantities

Subsoil works	100,000 m <sup>3</sup>
Lime stabilisation	80,000 m <sup>2</sup>
Cement stabilisation	10,000 m <sup>2</sup>
